RESEARCH EXPERIENCE

- **MoE Key Lab of Artificial Intelligence, AI Institute, X-LANCE Lab, SJTU** Shanghai, China
Research Intern, Advised by Prof. Xie Chen Dec. 2021 - Present
 - **Improve ASR Performance Through Self-Supervised and Unsupervised Learning**
Utilizing the *fairseq* framework, replicated mainstream Self-Supervised Learning (SSL) models such as wav2vec 2.0, HuBERT, data2vec, and Wav2vec-U 2.0. By synergistically integrating the unique features of these models, further boosted their performance in Automatic Speech Recognition (ASR).
 - **Unsupervised Active Learning for Automatic Speech Recognition**
This work enhances SSL's capability to further reduce labeling costs using active learning. Through unsupervised derivation of speech units and a contrastive data selection method, achieve an over 11% improvement in word error rate (WER) with equivalent labeled data or halve the labeling cost while maintaining the same WER, compared to random selection.
- **Speech, Audio, and Language Technologies (SALT) Lab, UT-Austin** Austin, USA
Research Intern, Advised by Prof. David Harwath and Eunsol Choi May, 2023 - Present
 - **Audio and Language Understanding (LLM)**
Leveraging advanced language models (llama), for audio understanding.
